

Receiz

COMPANY PURPOSE

Digital authority, made portable.

Receiz is the missing authority layer for the digital world.

HTTP made information portable. Receiz makes authority portable.

PROOF

IDENTITY

AUTHORITY

STATE

HISTORY

THE OBJECT CARRIES THE CASE FILE

**AI made copies
infinite.**

**Authority still
does not travel.**

The value of digital objects is rising while the evidence that gives them standing remains trapped behind platforms.

This is the discontinuity.

Receiz makes digital authority portable.

A Receiz object can carry enough authenticated evidence to explain what it is, where it came from, who has authority now, what happened before, and what transition is valid next.

WHAT IT IS

WHERE IT CAME FROM

WHO HAS AUTHORITY

WHAT HAPPENED

WHAT CAN HAPPEN
NEXT

Implemented. Public. Independently verifiable.

Receiz is not a concept deck. It is a shipped system with public proof, an open verifier, developer rails, and a release law.

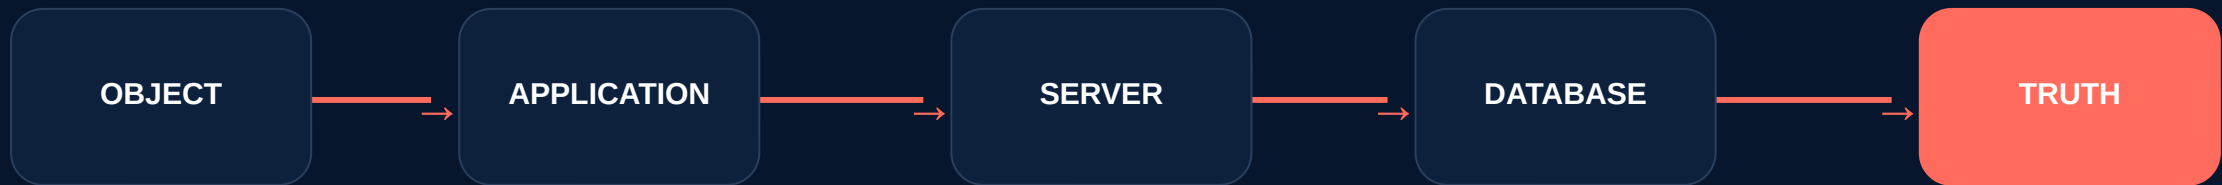

Operating snapshots · July–August 2026

Public surfaces: verifier · SDK · MCP · workbench · identity · settlement · offline notes · Live Twin

The database owns the truth about the object.

Today the object is usually only the payload. Its identity, provenance, ownership, permissions, history, and current state live somewhere else.

Move the object outside that stack and its standing weakens.

We separated the thing from the truth about the thing.

Every system now has to reconstruct trust from fragments.

Identity

account provider

Provenance

metadata / logs

History

ledger / audit trail

Ownership

platform database

Permissions

access-control system

Current state

application backend

The world keeps building databases to explain databases—and reconciliation systems to reconcile reconciliation systems.

Trust disappears at the boundaries.

01

MOVE

The bytes travel. Their standing stays behind.

02

GO OFFLINE

Most authority systems stop functioning.

03

CHANGE APPS

The same person or object forks into another representation.

The problem is not a lack of data. The data does not carry its own standing.

The object becomes the case file.

Receiz built the proof object: exact bytes and governing evidence travel together.

RECEIZ PROOF OBJECT

Exact bytes

Identity + provenance

Custody + ownership

Accepted state + history

Authority for the next transition

MOVE

The standing travels with the object.

VERIFY

Another machine can recompute the truth.

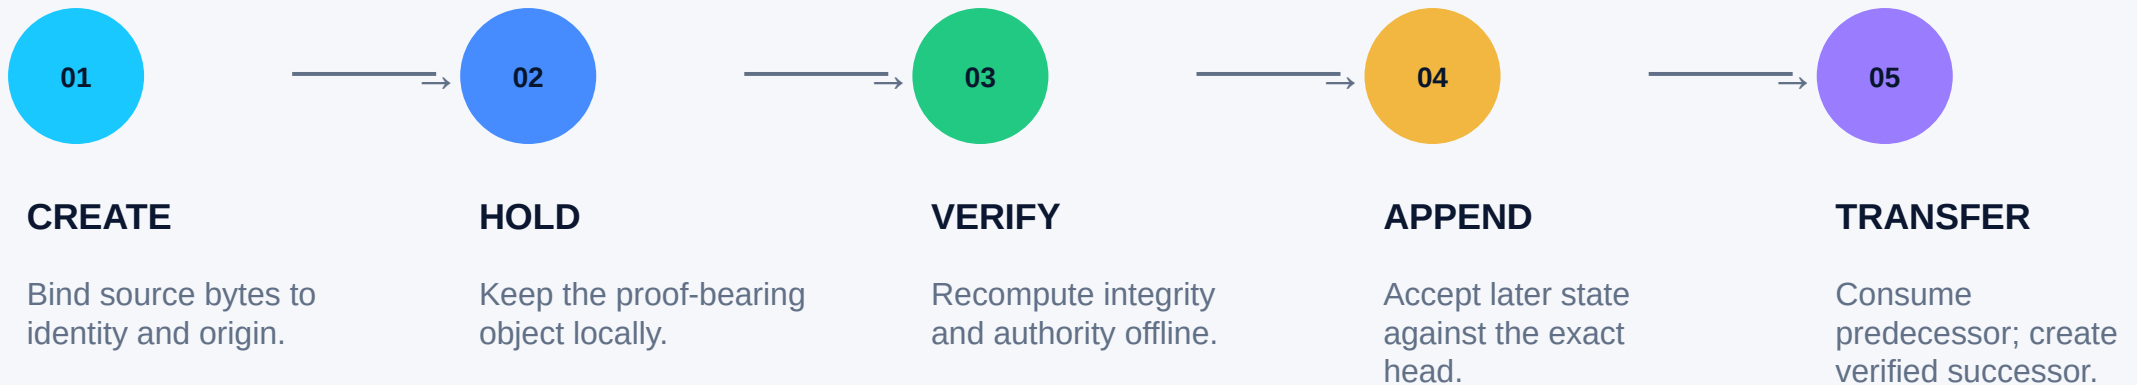

CONTINUE

Later state appends without rewriting the past.

TRANSFER

Successor authority can consume the predecessor.

One object. One accepted history. One valid next move.

Servers can coordinate this process. They are no longer the witness that makes it true.

Server off. Proof survives.

Receiz has already demonstrated the authority inversion in the condition that matters most: without the network.

SEALED FILE

exported as a portable proof object

PASS

AIRPLANE MODE

verified locally without server state

PASS

ALTERED COPY

fails exact-byte verification

FAILS

Open challenge: produce a non-Receiz file that passes the Receiz verifier.

Not one feature. A production runtime for verified reality.

PROOF	IDENTITY	VALUE	AGENCY
Record moment	Receiz ID	Ownership	SDK
Seal file	Identity Seal	Settlement	MCP
Verify locally	OIDC + Connect	Reserve	Live Twin
Append history	Account continuity	Offline notes	Embedded actions

One governing law flows through the native artifact, SDK, MCP adapter, AI skills, verifier, payments, and public surfaces.

Five movements are converging on the same missing primitive.

AI

Copying became infinite.

AGENTS

Machines now act across systems.

PROVENANCE

Origin must travel with media.

LOCAL-FIRST

State must survive the server.

DIGITAL OWNERSHIP

Authority must transfer, not merely display.

The market is every digital object whose standing matters.

Receiz begins with objects people already want to own and share—then expands wherever identity, state, custody, history, or settlement must survive the platform.

BEACHHEAD**Creators · sports · media · credentials****EXPANSION****Brands · marketplaces · developers · communities****PLATFORM****Identity · enterprise records · AI agents · machine commerce****END STATE****The authority layer beneath valuable digital objects**

The market found the parts. Receiz built the whole.

SYSTEM	IDENTITY	PROVENANCE	OFFLINE STATE	CURRENT AUTHORITY	SUCCESSOR + HISTORY
C2PA / Sigstore	—	YES	BUNDLE	—	—
DIDs / OAuth	YES	PARTIAL	—	DELEGATED	—
Automerger / local-first	—	—	YES	MERGED	HISTORY
Blockchain systems	KEY / ACCOUNT	LEDGER	NETWORK	TOKEN STATE	CHAIN
RECEIZ	CARRIED	CARRIED	YES	CARRIED	CONSUMED → SUCCESSOR

Receiz does not add another witness. It makes the object carry the evidence that determines its standing.

Truth cannot downgrade.

Receiz is protected by an authority hierarchy implemented across artifact, state law, verifier, SDK, MCP, APIs, and product surfaces.

Exact-head binding

Append-only history

Offline verification

Deterministic conflict law

Exact-byte reconstruction

Successor authority

SEALED PROOF OBJECT

DETERMINISTIC ACCEPTED STATE

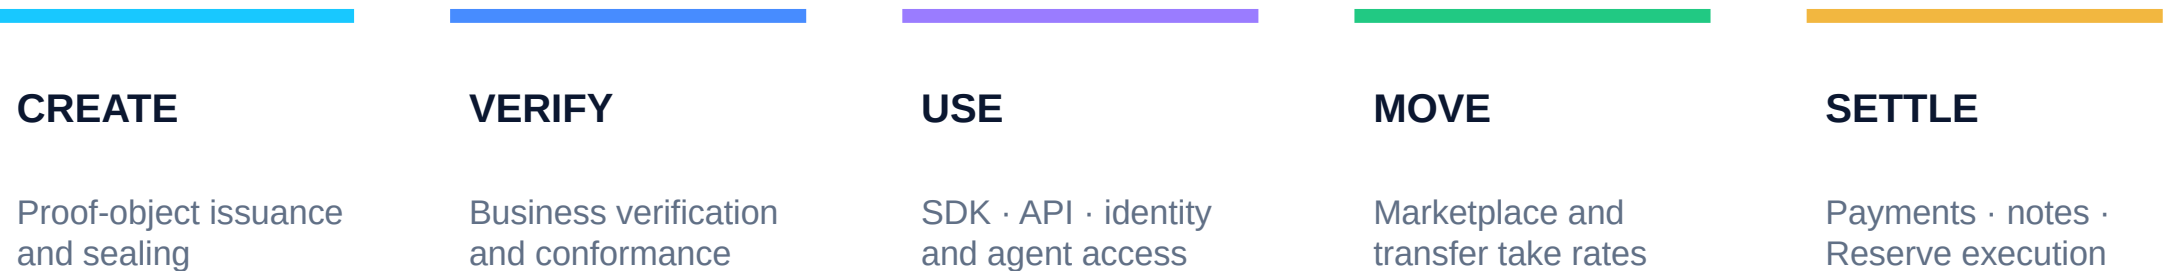

SERVER COORDINATION

DATABASE PROJECTION

SESSION / UI CACHE

A competitor must reproduce the law and every place the law is enforced—not copy a feature.

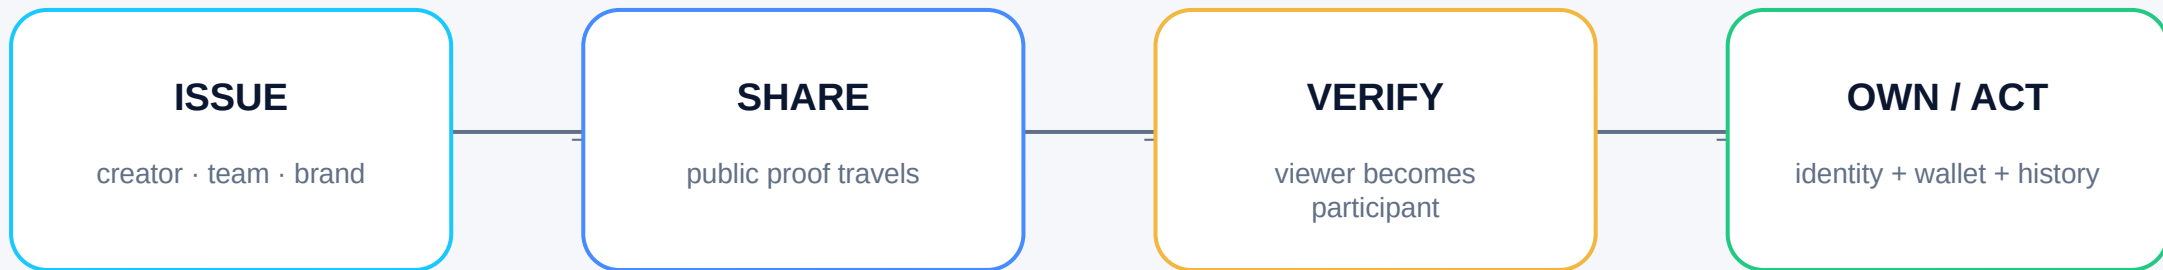

Monetize every time verified truth is created, used, moved, or settled.

The same primitive supports consumer products, business workflows, developer infrastructure, and machine-to-machine activity.

Every artifact is an acquisition surface.

Receiz sells the primitive through objects people already want—then turns every share, verification, purchase, and transfer into distribution.

**WEDGE****Sports · creators · verified media****EXPAND****Brands · marketplaces · developers · agents**

Distribution compounds because the proof object itself is portable.

Founder-built because the primitive had to stay coherent.

BJ Klock

Founder · architect · operator

Built Receiz end to end across protocol law, proof objects, product, verifier, identity, settlement, SDK, MCP, agents, media, sports, and public infrastructure.

>1B

views generated across internet distribution

v124

one coherent system carried into production

PUBLIC

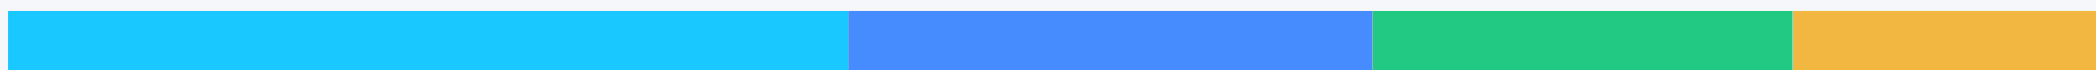

work, proofs, verifier, and challenge are inspectable

Capital does not fund the idea. It surrounds the completed primitive with the team required to scale it.

\$10M for 1%.

Capital converts implemented depth into category ownership.

40% Product + infrastructure

25% Distribution + partnerships

20% Compliance + trust operations

15% Team + operating scale

0–6 MONTHS

Focused onboarding · investor-grade telemetry · production partnerships

6–12 MONTHS

Paid proof loops · creator/team issuance · developer integrations

12–18 MONTHS

Repeatable acquisition · partner pull · proof-native asset volume

FIVE-YEAR VISION

Valuable digital objects will carry their own standing.

The default question will no longer be which database says it is true.
It will be: does the object verify?

HTTP made information portable.

Receiz makes authority portable.

Lead the authority layer before the world realizes it has been missing.
